

## Insight and Action

## In-place Data Management

## Low Impact

## Engage With Your Data

## Immediate ROI

# Use Cases

## Cost-Effective & Efficient eDiscovery Response

RG was engineered to balance low disruption, high efficiency and high defensibility. Immediately assess your data universe from one central interface to search, analyze, preserve and collect key data to a review repository.

## Data Health Check & Data Legacy Clean Up

The best cure for fear and uncertainty is real insight into your data. Identify what needs to be retained or deleted. Optimize your storage to save on hard costs while reducing potential risk down the road.

## Records Management and Regulatory Compliance

RG automatically recognizes complex data categories and specifies exactly what should happen to those records in a consistent, documented, and highly defensible way. Ensure compliance with applicable regulations and train the system to recognize potential offenses to proactively avoid compliance violations.

## Internal Investigations & Audits

Stop selecting which matters to investigate. RG removes any cost barrier as data can be searched, analyzed and interrogated as many times as needed without incurring additional fees or utilizing internal IT resources.

## Information Security

Recognize sensitive corporate information the moment it's created and reduce the risk of harmful data breaches by proactively moving sensitive information out of high-risk areas into more secure locations.

## Data Privacy Protection

Not ensuring data privacy can be a costly mistake. RG documents personal data as an ongoing business function from the moment it's created, to ensure compliance with a growing network of international regulations. Ensure GDPR compliance and DSAR response automation without the need to outsource.

# Product Features

## Visualizations

When you have massive amounts of data, sometimes you don't know what questions to ask. You want to explore data, not run static searches. With Rational Governance, you can analyze data in interactive visualizations to iteratively drill down, refine, and act.

## Dynamic Searching

We've turned static searching into a conversation with your data. Use regular expression pattern matching, special text operators, metadata recognition, and machine learning output to automatically assign classifications to unstructured content as it's created and as it evolves.

## Advanced Analytics

Apply tightly integrated machine learning and other artificial intelligence tools to discover data that conventional searches may not be able to identify. Our AI set learns from your experts and applies their decision-making process across hundreds of TBs of data without ever losing productivity, consistency, or auditability – it's the team member you've been missing.

## Policy Engine

Many file analysis tools simply stop at analysis. In business, having intelligence is not enough; you need to act on it, and you need to do it fast. Rational Governance features a powerful policy engine that allows you to enforce the lifecycle of all managed data automatically. RG policies can take the following actions on documents:

**Preserve & Hold** – Keep documents that need to be kept, without creating copies

**Collect & Export** – Effect a forensically sound collection of relevant ESI and export to a specified location

**Retain & Delete** – Create retention policies in line with your governance strategies, including defensible deletion

**Move & Copy** – Ensure that documents are stored in their correct locations

**Monitor & Alert** – Monitor employee data and receive alerts for any content-related event

## Integration With Rational Review

Seamlessly collect data directly from Rational Governance into Rational Review, our proprietary eDiscovery platform, so that in-house or outside counsel can perform further analysis, review documents, and produce data to third parties.
