

Insight and Action

Identify, control, and understand
all enterprise data, in place

Drive value from your company's rapidly growing data and eliminate hidden risks that are growing along with it. Rational Governance provides a complete solution to understand and manage unstructured data in place and in real-time, with integrated machine learning to amplify your insight and control to enterprise scale.

Key Features

Centralized Data Index

RG strips the text and metadata from documents within managed data sources to create a single, unified index, which can then be leveraged to comprehensively explore and control data.

Visualizations

Visualize data in customizable histograms and iteratively drill down, refine, and take action on documents.

Dynamic Searching

RG reimagines the role of search, transforming it from a basic utility to intelligent identification. Leverage complex parameters and criteria to find, cull, and classify your data.

Key Features

Advanced Analytics

Apply integrated machine learning and other artificial intelligence tools to discover data that conventional methods may not be able to identify.

Policies

RG's powerful policy engine allows you to enforce the lifecycle of all managed data automatically. RG policies can take the following actions on documents:

- » Preserve & Hold
- » Collect & Export
- » Retain & Delete
- » Move & Copy
- » Monitor & Alert

Key Features

Permissions, Audit & Reporting

Granular security controls and permissions dictate which data and functionality administrators can access. Every action within Rational Governance is audited and can be reported upon.

Integration With Rational Review

Seamlessly collect data directly from RG into Rational Review, our proprietary eDiscovery platform.

SUPPORTED DATA SOURCES:

Key Benefits

In-Place Data Management

RG brings visibility to unstructured documents where people are used to working, so you can automatically apply classifications to information as soon as it's created.

Real-Time & Evergreen

RG allows real-time access to data and self-updates constantly, both in its index of enterprise data, and in its automatic triggers for document classifications and management.

Engage With Unstructured Data

RG brings structure to data types that were once difficult to address. Analyze unstructured content in conjunction with structured data to provide a more holistic view of the enterprise.

Low Impact & Invisible

Every element of RG was purpose-built to be lightweight and invisible to the end user. Employees will never notice poor performance and won't be interrupted to classify documents.

Proactive

While RG can be deployed at a moment's notice in a reactive context, its real purpose is for proactive enterprise data governance, so that problems don't present themselves in the first place.

Risk Mitigation & Value Creation

Information is both an asset and a liability. Mitigate the risks posed by storing an ever-increasing volume of data while also enhancing value and driving profitability.

Professionally Tailored to Your Needs

Professional Services

Rational's client services team consists of information experts and senior consultants who have the necessary experience to guide you through whatever information governance project you may be tackling.

Pricing that Delivers Immediate ROI

Our pricing is clear, transparent and is based on the actual value you receive. Rational's flexibility allows us to devise an approach that suits each client's needs, rather than one-size-fits-all. The ROI of RG is immediate, and its value will only grow from there.

Deployment Options

Infrastructure for RG can be set up behind your company's firewall or hosted with a trusted cloud provider. In either case, data security is ensured as a top priority.

Use Cases

Records Retention & GRC

RG automatically recognizes complex data categories and specifies exactly what should happen to records in a consistent, documented, and highly defensible way. Ensure compliance with applicable regulations and train RG to recognize potential offenses to proactively avoid compliance violations.

Discovery Response

When a litigation, investigation, or records request arises, use RG for immediate case assessment. Enterprise documents can be centrally searched and analyzed at the source; potentially relevant documents can be preserved in-place and custodians can be notified of their hold obligations. Finally, RG enables targeted collection to any review repository for further analysis.

Information Security

RG recognizes sensitive corporate information the moment it's created and reduces the risk of harmful data breaches by proactively moving sensitive information out of high-risk areas into more secure locations.

Data Privacy Protection

RG documents personal data as an ongoing business function to ensure compliance with a growing network of international regulations, including GDPR. Empower your privacy professionals to respond quickly to DSARs without the need to outsource.

Legacy Data Clean Up

Address unorganized, poorly understood, and rarely accessed documents that serve little to no business value. Use RG to identify what information needs to be retained and destroy the balance. Not only will you optimize your storage and save on hard costs, but you will reduce risk down the road.

Big Data Analytics

Organizational data presents an unprecedented opportunity for new insights into the business environment. RG's predictive modeling tools enable the analysis of potentially millions of variables to discover key components and relationships driving complex systems and behaviors.
