

Compliance

Monitor, audit, and control organizational data to ensure it is aligned with your legal, regulatory, and business requirements

Many organizations find it difficult to navigate the growing information governance and compliance challenges they face. Whichever regulations your company is subject to, not doing enough to ensure compliance could be a costly mistake. Rational Governance enables your team to swiftly and easily coordinate critical compliance requirements.

BENEFITS

- ✓ Increase Efficiency
- ✓ Reduce Risk
- ✓ Avoid Sanctions
- ✓ Improve Defensibility

With RG installed, organizations can automatically enforce a variety of compliance policies, including on PII, PHI, privileged, and confidential data, wherever it may reside. Identify sensitive data using advanced search and machine learning, alert administrators of its existence, automatically destroy content, move it out of high-risk locations, and enforce its retention.

RATIONAL Governance

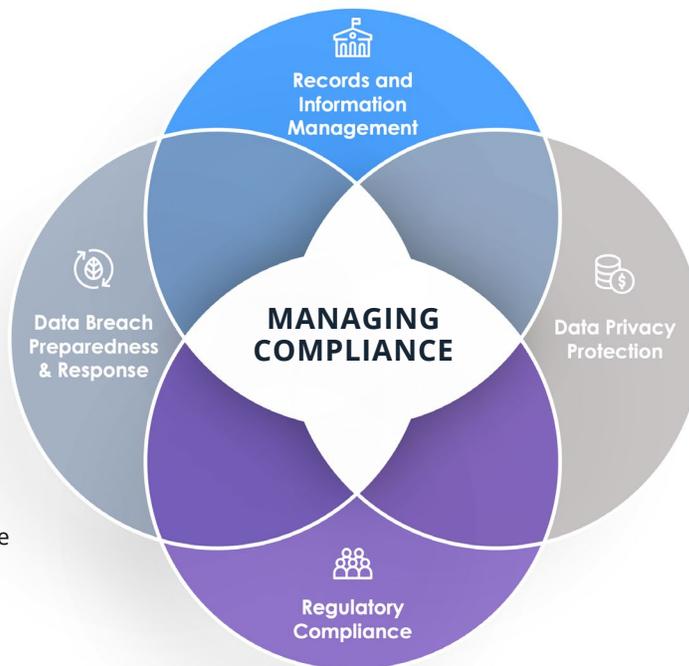

Rational Governance is the complete solution for understanding and managing all enterprise data in place and from a central location. RG's lightweight agents are connected to unstructured data sources, creating a text and metadata index for seamlessly searching and controlling data for compliance purposes without burdening employees.

Records Information Management

Simplify and automate records retention and ensure long-term safeguarding of critical content

Data Breach Preparedness & Response

Reduce the risk of accumulated sensitive data and determine the impact of a data breach

Data Privacy Protection

Identify sensitive data, enforce retention, notify compliance lapses, and control the flow of data

Regulatory Compliance

Recognize problematic communications and proactively and defensibly avoid compliance violations

Records and Information Management

RG helps organizations enforce records retention policies that accurately reflect the enterprise's data and are compliant with the legal and regulatory environment of the enterprise. RG can automatically recognize data fitting into the most complex categories and specify exactly what should happen to those records in a consistent, documented, and highly defensible way, all while taking the onus of classifying documents into policies off of employees.

Data Privacy Protection

Rational Governance is the ideal tool to document your Personal Data (PD) as an ongoing business function, as it tracks and controls every document within an organization from the moment of creation. The automated document actions empower privacy professionals to enforce retention, control the flow of data, notify admins on lapses in compliance, and quickly responds to requests from individuals and regulatory authorities. RG's smart PII functionality allows data with sensitive content and Personal Data (including PII and PHI) to be identified, flagged, managed, and secured automatically.

Regulatory Compliance

Every company must adhere to a myriad of laws and regulations as part of their day-to-day operations. Rational Governance can proactively and defensibly avoid compliance violations by being trained to recognize potentially problematic communications and behavior, and alert administrators should they be detected.

Data Breach Preparedness & Response

RG improves an organization's data privacy, data security, and data loss prevention programs by:

Moving sensitive data out of high-risk areas

Notifying admins regarding the creation and movement of sensitive data

Reducing cyber-risk surface area by de-duplicating sensitive data

Enhancing other security procedures and tools (e.g., DLP software)

Helping organizations and regulators determine what data was lost or compromised after a data breach

Jurisdictional Data Storage

By controlling data in-place, RG allows the organization to maintain possession, custody, and control of its data within the appropriate jurisdictional boundaries. Similarly, with an RG instance hosted in a cloud environment, data can also be strictly maintained within specific jurisdictional boundaries.

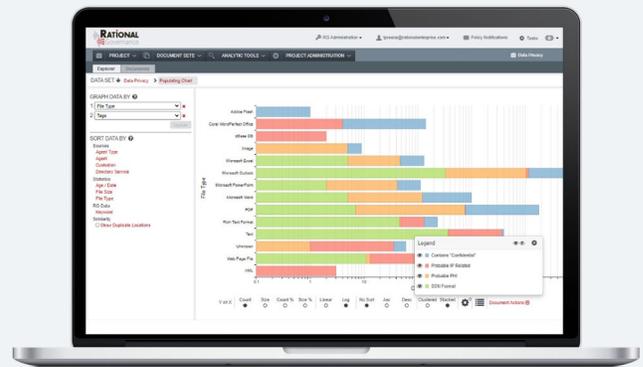

Data Discovery

Whether your organization is a government agency subject to Open Government requests, or a European entity subject to Data Subject Access Requests (DSARs), RG makes finding and producing data relevant to mandatory discovery easier and faster.

Smart PII

Rational Governance's Smart PII tool supercharges your compliance and privacy workflows with machine-learning-enhanced pattern recognition and keyword search capabilities to help you find what you need when you need it.

- ✓ **Pre-Identify PII.** Identify documents containing PII while eliminating the false positives.
- ✓ **Respond to DSAR's.** Train Smart PII to identify when the use of a first name only is referring to your data subject.
- ✓ **Delete with Certainty.** Use Smart PII to help delete with statistical certainty when executing requests relating to erasure rights.
