

eDiscovery Response

Discover any and all information relevant to the case from a central console

Rational Governance allows an organization to respond rapidly to an investigation or litigation. Organizations can place broad holds on potentially relevant information, immediately and in place; explore, filter, and even view data prior to collection to refine the set of potentially relevant data; notify document custodians of their hold obligations; and finally, export only relevant data to a review platform of their choosing.

By providing organizations the ability to analyze documents immediately and in place, Rational Governance allows organizations to begin an efficient and defensible discovery strategy earlier than ever before, thereby reducing the risks and costs associated with a typical discovery process.

RATIONAL
Governance

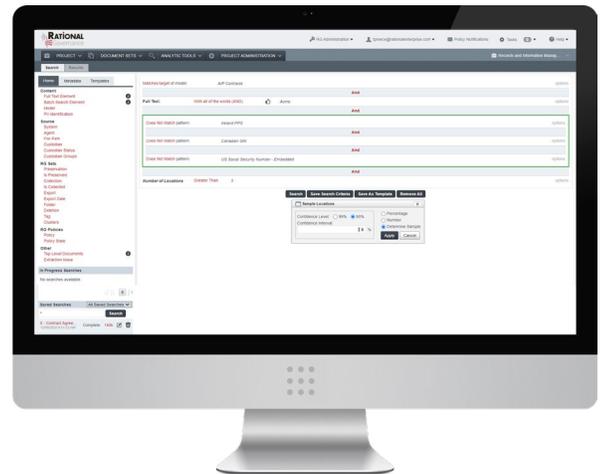

Rational Governance is the complete solution for understanding and managing enterprise data in place and from a central location. RG's lightweight agents are connected to unstructured data sources, creating a text and metadata index for seamlessly searching and controlling data without relying on custodians.

Early Case Assessment

Enterprise content visibility and control is essential for assessing the scope of a matter, determining your organization’s exposure, and developing the proper legal strategy as early as possible. As soon as an investigation or litigation is anticipated, organizations using RG can begin immediate case assessment with full access to all company documents. In addition to viewing the text and all metadata of any managed content, an organization can explore important document characteristics in graphical form.

Search and Analysis

Documents residing anywhere in the enterprise can be centrally, automatically, and transparently searched, analyzed, and refined. RG allows organizations to find relevant documents easily by applying search terms and machine-learning models to all unstructured data at its source, thereby decreasing the number of documents the organization must eventually hold, collect, and export to outside counsel. Shifting preliminary analysis in-house thus dramatically reduces litigation hosting and review costs.

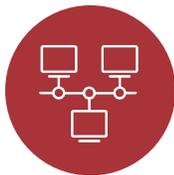

Legal Hold Notifications

With built-in Legal Hold Notifications, RG automates the notification process and provides peace of mind that legal holds are enforced with respect to documents that reside offline or in unmanaged locations. RG allows an organization to issue email notifications to relevant document custodians and monitor their compliance.

Preservation

Rational Governance builds upon traditional Legal Hold Notification technology by enabling an organization to preserve content in place, without consuming resources, sacrificing system performance, or interrupting business operations. Quickly identify data potentially relevant to a given matter through search criteria and advanced analytics and enforce a broad preservation to eliminate the risk of spoliation.

Preservations override other retention rules so that no content is inadvertently destroyed, can be expanded or released as needed, and are automatically applied to any newly created documents that also meet the preservation criteria.

Collection

RG allows for search, analysis, and legal hold to be applied pre-collection. RG can then be leveraged for targeted collection from any managed data source into Rational Review or any other review repository. By separating Preservation and Collection, RG ensures that all potentially relevant data is preserved, while simultaneously reducing the number of documents passed downstream to litigation review. This process not only saves significant review and processing time and costs, but also minimizes data security risks by reducing the number of documents transferred outside the organization's native security environment.

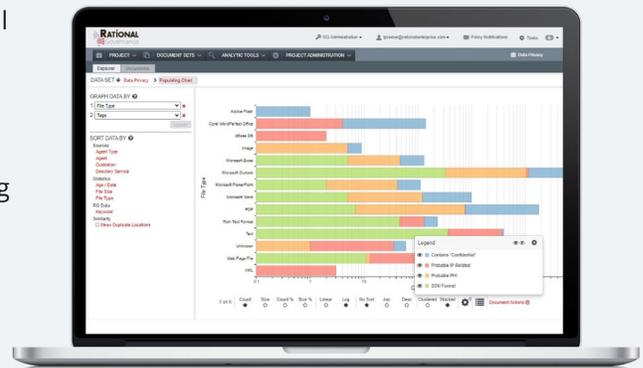

“Rational Enterprise has provided us with an end-to-end solution that handles in-place data management combined with effective and efficient eDiscovery response which has significantly reduced our eDiscovery spend.”

Smart PII

Rational Governance's Smart PII tool supercharges pre-discovery workflow with machine-learning-enhanced pattern recognition and keyword search capabilities to help you find what you need when you need it.

- ✓ **Refine Search Term Results.** Eliminate false positives from search term results to a high degree of statistical certainty in a fraction of the time it would take to review false positive results.
- ✓ **Target Collection.** Search results refined with Smart PII can be used to target data collections, representing significant cost savings and efficiency gains.
- ✓ **Pre-Identify PII.** Pre-identify documents containing PII and requiring redaction to better tailor your discovery workflow.
